

Bibliography

1. *Using Taylor's formula in computing some limits*, Gazeta Matematică **7-8** (1992).
2. *Remarks on extremely disconnected spaces*, Proceedings of the Students Scientific Conference, Iași, 1994.
3. *A remarkable class of groupoids and some problems concerning groups of subsets*, Algebraic hyperstructures and applications (Iași, 1993), Hadronic Press, Palm Harbor, FL, 1994, 231-235.
4. *Identities involving the Fibonacci sequence deduced by matrix analysis* (with C. Cocea), Gazeta Matematică **6** (1995).
5. *A sufficient condition involving sets of strictly increasing functions*, Proceedings of the Students Scientific Conference, Iași, 1995.
6. *Functional differential equations with delay in Hilbert spaces*, An. Științ. Univ. Al.I.Cuza Iași, Sect. I a Mat. **41** (1995), 169-175.
7. *Periodic solutions for nonlinear wave equations*, B.A. Thesis, Univ. Al.I.Cuza, Iași, 1997.
8. *A local well-posedness result for the quasilinear wave equation in \mathbb{R}^{2+1}* (Ph.D. Thesis, Princeton University, 2002), Comm. Partial Differential Equations **29** (2004), 323-360.
9. *An analysis of recursively defined continuous functions* (with M. Magno), Proceedings of the UCLEADS Research and Leadership Symposium, UCLA, 2004.
10. *Dispersive estimates for wave equations with rough coefficients* (with D. Tataru), Comm. Partial Differential Equations **30** (2005), 849-880.
11. *Universal microfluidic gradient generator* (with D. Irimia and M. Toner), Anal. Chem. **78** (2006), 3472-3477.
12. *A phase space transform adapted to the wave equation* (with D.

- Tataru), *Comm. Partial Differential Equations* **32** (2007), 1065-1101.
13. *Gradient NLW on curved background in 4 + 1 dimensions* (with D. Tataru), *Internat. Math. Res. Notices* **2008** (2008), rnn108-58.
14. *A remark on an equation of wave maps type with variable coefficients*, *Math. Res. Lett.* **16** (2009), 395-404.
15. *How to build and coach a college math team*, Volume dedicated to the Centennial of “Alexandru Myller” Mathematical Seminar, *Libertas Math.* **30** (2010).
16. *A continuity argument for a semilinear Skyrme model* (with S. G. Rajeev), *Electron. J. Differential Equations* **2010** (2010), No. 86, 1-9.
17. *Nonconcentration of energy for a semilinear Skyrme model* (with S. G. Rajeev), *Ann. Physics* **325** (2010), 2697-2706.
18. *Global well-posedness and scattering for Skyrme wave maps* (with K. Nakanishi and S. G. Rajeev), *Commun. Pure Appl. Anal.* **11** (2012), 1923-1933.
19. *On the regularity of the 2+1-dimensional equivariant Skyrme model* (with D. da Silva), *Proc. Amer. Math. Soc.* **141** (2013), 2105-2115.
20. *Restricted convolution inequalities, multilinear operators and applications* (with A. Greenleaf, A. Iosevich, E. Palsson, and E. Sawyer), *Math. Res. Lett.* **20** (2013), 675-694.
21. *Ill-posedness results for generalized Boussinesq equations* (with A. A. Himonas and D. Karapetyan), *Nonlinear Anal.* **95** (2014), 404-413.
22. *Sharp global regularity for the 2 + 1-dimensional equivariant Faddeev model* (with K. Nakanishi and X. Zhang), *Int. Math. Res. Not.* **2015** (2015), rnn037-17.
23. *An introduction to the theory of wave maps and related geometric problems* (with M. G. Grillakis), New Jersey, World Scientific (2016), xviii+478 pp. ISBN: 978-9814713900.
24. *Large data global regularity for the classical equivariant Skyrme*

model (with M. G. Grillakis), preprint, arXiv:1707.02917 (2017).

25. *Large data global regularity for the 2 + 1-dimensional equivariant Faddeev model* (with M. G. Grillakis), preprint, arXiv:1709.00331 (2017).
